### About me

Hello! I'm a junior Frontend Developer. I have studied web programming and I am now searching for my place in the IT sector.

In my past experience I learned teamwork, work under pressure, fluency with digital technologies and resolution of both human and technical conflicts.

I have attended an 8 month bootcamp where I learned HTML5, CSS3, Sass, Bootstrap, Javascript ES6 and React.

In addition, the training gave me good practices such as Clean Code, methodologies such as Agile and knowledge in GIT version control.

I'm looking for a chance to evolve in the web programming world.

Here are three published pages I've done as an example of layout and functionality with API.
